Lithodecor Fassaden GmbH production plant in Netzschkau (Germany)

In 2021, the Lithodecor brand broke away from DAW SE and joined the **STEINMANN GROUP**. The company, which has been active nationally and internationally for more than 25 years, is now part of the family-owned facade specialist.

**Lithodecor Fassaden GmbH** - within the STEINMANN GROUP - has a qualified and experienced team of employees.

We offer new and comprehensive competences for the construction of ventilated curtain wall facade systems.

Competences that make it possible to realize diverse design ideas where other systems reach their limits.

The delivery plant in Netzschkau is equipped with the latest and highest quality machinery, so we have the best conditions to handle your order professionally.

**Quality means that the customer  
and not the product come back!**

„stands out on the front“!

### **Manufactory of Lithodecor® systems:**

With our Manufactory in Netzschkau, we have been specialists in the production of ventilated facade elements in lightweight construction systems for over 25 years. In addition to standard elements, we also supply exclusive facade solutions in **glass, ceramic and natural stone**.

#### **LIGHTWEIGHT**

Due to our special carrier plate we guarantee very low weight per unit area of all systems.

#### **DIVERSE DESIGN**

Maximum formats and innovative shapes where other systems reach their limits.

#### **QUICK ASSEMBLY**

High degree of prefabrication, weather-independent and fast assembly due to modular and lightweight construction.

#### **MANIFOLD FASTENING**

Lithodecor® facade elements can be attached to the facade in a wide variety of ways.

„stands out on the front“!

### SAFE AND ROBUST

Lithodecor® facade systems can be produced in flame-retardant as well as in non flammable (fire resistance classes B1 and A2) according to approval. Furthermore, Lithodecor elements offer impact and explosion protection. (E5 classification according to DIN 14019)

### OPTIMAL ENERGY BALANCE

Pre-hung, thermally insulated facade systems can significantly improve the energy balance of buildings and thus contribute to lower maintenance and energy costs. Buildings with Lithodecor® can also be certified with DGNB, Leed (U.S. Green Building Council) or BREEAM.

### RESOURCE-EFFICIENT

Litho-Stone®, due to its special structure, enables an even more resource-saving use of raw materials on the facade. Due to the lower weight of all Lithodecor® systems, the raw material requirements of the fastening structures can also be reduced.

### REFURBISHMENTS

Lithodecor® facade systems are particularly suitable for low load-bearing capacities of the shell. In special cases, the reuse of no longer available natural stone resources is also possible.

# SERVICES

*better together*

Consultation • Sample service • Indicative prices and preparation of quotations • Tender support and service specification texts • Technical support and standard details • Factory visits and seminars • Strip Cooperation with certified testing institutes • Production according to the highest quality standards • Support with transport and logistics

## System presentation: Litho-Stone

Litho-Stone offers a wide range of possibilities for the design of your high-quality natural stone facade with numerous natural stone types, formats and shaped parts. Even large slabs **up to 7.7 m<sup>2</sup>** are suspended in the aluminum substructure with invisible fasteners.

The panels consist of a **5 to 15 millimeter** thick natural stone element as top layer on a maximum 19 millimeter thick lightweight concrete support and are up to **60% lighter** than solid natural stone panels.

**Overhead installation** is also possible with non-visible fasteners.

<b>System:</b>	Ventilated curtain wall system with natural stone slabs on lightweight concrete girders
<b>Properties:</b>	Compensation of unevenness thanks to flexible substructure, weather and frost resistant
<b>Fixing:</b>	Non-visible fastening on an aluminum substructure
<b>Finishes/Appearance:</b>	Upon request and request of the customer
<b>Size:</b>	Up to 7.7 m <sup>2</sup> panel size, depending on the rough stone format
<b>Overhead:</b>	Up to 5.26 m <sup>2</sup> (max. 4.05 x 1.30 m) Overhead application with AbZ
<b>Approval:</b>	Building authority approval available
<b>Thermal protection:</b>	Mineral wool insulation (WLG 032 and 035)
<b>Impact resistance:</b>	E5 - classification possible, DIN 14019, highest resistance to mechanical influences

## System presentation: Litho-Glass

**Litho-Glass** consists of resistant composite panels with a maximum thickness of 28 mm +/- 1 mm. thick laminated panels. The 8 mm ESG-H glass panel (toughened safety glass) is fully bonded to a lightweight concrete support.

The panels, which measure **up to 7.74 m<sup>2</sup>**, are fastened with an invisible agraffe suspension construction. The toughened safety glass panels undergo a „**heat-soak test**“ and are available in **numerous** attractive **color variants** - **individual digital printing** is also possible.

Let your imagination & creativity run wild!

<b>System:</b>	Pre-ventilated facade system with ceramic panels on lightweight concrete girder
<b>Properties:</b>	Compensation of unevenness due to flexible substructure, weather-resistant, frost-resistant
<b>Fixing:</b>	Non-visible fastening on aluminum substructure
<b>Finishes/Appearance:</b>	Color shades e.g. according to RAL / RAL Design, NCS or special color shades or digital printing
<b>Size:</b>	Up to 7.74 m <sup>2</sup> (max. 1.8 x 4.3 m), overhead up to max. 5.26 m <sup>2</sup> (max. 1.3 x 4.05 m)
<b>Approval:</b>	Building authority approval available
<b>Thermal protection:</b>	Mineral wool insulation (WLG 032 and 035)
<b>Impact resistance:</b>	E5 - classification expected, DIN 14019, highest resistance to mechanical influences
<b>Behavior in fire</b>	Flame retardant, building material class B1 according to DIN 4102-1 Non-combustible, building material class A2-s1, d0 according to DIN EN 13501

# System presentation: Litho-Ceramics

**Litho-Ceramics** offers a **wide range** of **design** and **surface variants** for the creation of high-quality ceramic facades. **Largest tile formats** and **storey-high moldings** are suspended in the aluminum substructure without visible fastening.

The panels consist of a **6 to 12 millimeter** thick top layer which is fully bonded to a **maximum 19 millimeter** thick lightweight concrete beam. These are highly resistant to mechanical damage.

The variety of surfaces and colors give you enormous design versatility and freedom. Some of the surfaces look like natural stone, others like concrete.

<b>System:</b>	Pre-ventilated facade system with ceramic panels on lightweight concrete girder
<b>Properties:</b>	Compensation of unevenness due to flexible substructure, weather-resistant, frost-resistant
<b>Fixing:</b>	Non-visible fastening on aluminum substructure
<b>Finishes/Appearance:</b>	Extensive collection of design surfaces
<b>Size:</b>	3,200 x 1,500 mm or 3,600 x 1,200 mm, depending on surface structure, Overhead up to max. 5.26 m² (1.300 x 4,050 mm)
<b>Approval:</b>	Building authority approval available
<b>Thermal protection:</b>	Mineral wool insulation (WLG 032 and 035)
<b>Impact resistance:</b>	E5 - classification expected, DIN 14019, highest resistance to mechanical influences
<b>Behavior in fire</b>	Flame retardant, building material class B1 according to DIN 4102-1 Non-combustible, building material class A2-s1, d0 according to DIN EN 13501

**Project:** Office and administration building  
**Location:** Aarhus, Denmark

A low-angle, upward-looking photograph of a modern, multi-story building. The building's facade is composed of a grid of light-colored, rectangular concrete panels. These panels are arranged in a way that creates a series of deep, three-dimensional rectangular recesses and protrusions, giving the building a complex, sculptural appearance. Large, dark-framed windows are integrated into the grid, some appearing as solid dark rectangles and others as recessed glass panes. The building is set against a bright blue sky with scattered white clouds. In the bottom left corner, a portion of a green, leafy bush is visible.

## Sustainability

### **OUR CONTRIBUTION**

As a company, we know that responsible, sustainable action is successful in the long term. That's why we use climate-neutral green electricity for our sustainable energy supply.

### **BEING GENTLE WITH NATURE**

In addition to the outstanding quality of our facade elements, we also focus on the sustainable product design of our portfolio. The design of our production processes and products is carried out in the sense of reusability of the individual materials, extensive avoidance of emissions as well as the careful use of natural resources.

### **GENERATE LONG-TERM VALUE CREATION**

Litho-Stone®, enables an even more resource-conserving use of raw material on the facade due to its special structure. In the case of energetic façade renovations, for example, the preservation of natural stone can be ensured even in the case of already depleted natural stone deposits.

The ceramic of our product Litho-Ceramics is made of completely natural materials such as quartz, glass, silica, feldspar as well as some additional natural mineral oxides. Thereby already more than half of the material is recycled! The final product is 100% climate neutral and 100% recyclable!

The glass of our Litho-Glass® system comes from suppliers who place the highest demands on their climate efficiency. Certified according to the energy management system DIN EN ISO 50001 and the environmental management system DIN EN ISO 14001, the off-cuts produced during the glass cutting process can be reused in the production process. It can also be reused, for example, for the production of container glass, insulating wool, emery paper or glass blocks.

## Sustainability

### **CERTIFIED BUILDING OBJECTS:**

Here is a selection of our references in connection with the requirements for certifications in sustainable construction. We are happy to support architects and builders in relation to our designs in achieving the certification goal.

### **PROJECT OBER- RAMSTADT DAW ZENTRALE**

The new building of the largest private manufacturer of construction paints and thermal insulation in Europe was awarded DGNB Diamond in 2018.

### **PROJECT MOHNHEIM AM RHEIN RHEINPARKCARREE**

The 1st construction phase in Rheinpark with a total of 5,200 m<sup>2</sup> was completed at the end of 2013 and awarded DGNB Gold in the same year. The creative architecture with our Litho-Glass® elements characterizes the diverse appearance.

Our systems offer  
the best possible protection  
for your projects.

Explosion protection and  
Lithodecor materials with  
a wide range of design options.

E5 classification possible,  
DIN 14019, highest resistance  
against mechanical influences.

No falling down of  
façade elements as well as façade  
pieces guaranteed!
